

# STREAMING OPTIMIZATION

Get the most out of your internet access with the world's most advanced compression technology!

## HOW IT WORKS:

Applications natively use the bandwidth specified by the streaming service provider. Due to satellite latency, they will hold, facing "buffering" issues. Moreover, the bandwidth is not enough to support more streams simultaneously.

By selecting the video profile, Airmont limits the used bandwidth for each apps.

More users can enjoy a fluid video experience at the same time and it remains some bandwidth for other usages as surfing on internet, or using whatsapp...

### WITHOUT AIRMONT

3 Mbps satellite bandwidth

VS

### WITH AIRMONT

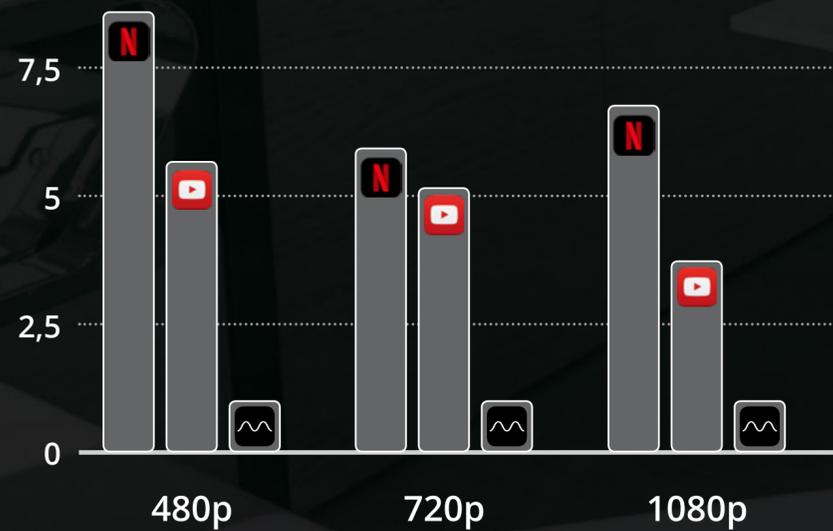

3 Mbps satellite bandwidth

**1,5 MBPS REMAINING!**  
**BANDWIDTH FOR OTHER INTERNET USAGE!**
